## SUMMARY

SAP ABAP developer with 6.5 years of IT experience, including 4.6+ years of dedicated ABAP development on S/4HANA. Delivered the end-to-end FCSD Pinnacle S/4HANA implementation with a FICO focus, and now builds procurement workflows and Fiori back-ends as a Senior ABAP Consultant at Deloitte. Hands-on with RAP, OData (V2/V4) and CDS modelling, with a track record of consolidating complex legacy interfaces into a single source of truth. Committed to Clean Core principles and scalable, high-performance solutions.

## EXPERIENCE

### Senior ABAP Consultant

May 2026 – Present

Deloitte · Client: BSH (Procurement)

- Built a two-level approval process on SAP Flexible Workflow for supplier-submitted records: event-driven start from the vendor portal, Fiori Inbox decisions, email notifications and application-log error tracking.
- Extended approver determination so first-level approvals route to the responsible purchasing-group owner instead of a fixed team.
- Extended OData V2 services for the Smart Purchasing Fiori app — create/update with business validations, plus a new Excel export with 16 additional columns built alongside the original so existing users were unaffected.
- Built CDS-based value helps for Flexible Workflow conditions in the Manage Workflows app.
- Resolved a production dump in an editable ALV maintenance program after an S/4HANA upgrade, and fixed WebDynpro data-binding defects between the supplier portal screen and back-end tables.
- Wrote technical specifications and planned the migration of legacy R/3 programs to S/4HANA.

### SAP ABAP S/4HANA Developer

Nov 2021 – Apr 2026

Ford Motor Company

*IERP implementation, Finance transformation & FCSD Pinnacle*

- Key developer on FCSD Pinnacle, a full-cycle S/4HANA implementation for Finance (FICO), from blueprint to go-live, rolled out across 3 international markets on one core codebase.
- Led the consolidation of legacy Goods Issue, Accounts Receivable and Goods Receipt flows into one IERP interface — a single source of truth for global finance.
- Built 3 RAP applications (managed scenario) for FICO data management.
- Delivered CDS views over OData V4 and Fiori tiles for real-time in-transit material tracking.
- Automated daily exchange-rate loads from GCR into S/4HANA (TCURR) with BAPI_EXCHRATE_CREATE.
- Automated monthly TPOP finance reports (.xlsx to AL11), removing 99% of the manual effort.
- Built RFC-based real-time Bill of Distribution transfer between S/4HANA and ECC with full data integrity through go-live.

### PL/SQL Developer / Associate Developer

Nov 2019 – Oct 2021

Ford Motor Company

*Database engineering & foundation for IERP*

- Designed and optimised PL/SQL stored procedures and triggers for transaction-level tracking and auditability.
- Led the PL/SQL logic for barcode systems across International Markets, enabling high-speed data capture at scale.
- Bridged database-layer and ABAP development during the early IERP journey, leading into the SAP ABAP track.

## SKILLS

| | |
|---|---|
| S/4HANA development | RAP (Managed / Unmanaged) · CDS Views & Annotations · AMDP · ABAP on HANA · OO ABAP |
| Integration & APIs | OData V2 / V4 · SEGW · Service Bindings · RFC / BAPI · REST · JSON · XML · File interfaces |
| Extensibility | BAdIs · User Exits · Substitutions (GGB1) · Enhancement Framework · Flexible Workflow · BRFplus |
| Functional | FI (AR / AP / GL) · SD · Procurement · Logistics |
| Languages & tools | ABAP · SQL · PL/SQL · Eclipse ADT · ATC · HANA Studio |
| Ways of working | Clean Core · Agile / Scrum |
